## A. Dispensary

### Dispensing outpatients' prescriptions

At the time of dispensing of outpatients' prescriptions, additional information is available by the pharmacists to assist the patient for the proper use, and storage of the medication, and to address any other concerns the patient may have with the medication. A label with the name of the patient and drug instructions is placed on every box of medication counseling the patient on how to use the medication.

## B. Central Pharmacy

## Chemotherapy pharmacy

- Developing new chemotherapy preprinted protocols, review and modify the existing
- Check chemotherapy orders. Verification of doses according to BSA, calculations of the volume that has to be withdrawn in the syringe. The pharmacist reviews the orders and serves as an important double check. The orders are entered into our custom made program for stock control.
- Provide information about safe handling of cytotoxic drugs (refrigerated drugs, reconstitution, dilution, administration, stability of diluted drug and compatibility with other drugs)

**Our clean room for the reconstitution of cytotoxic drugs  
The reconstitution of cytotoxic drugs is performed by  
trained nursing personnel**
